Overview

Bike Grid Maps

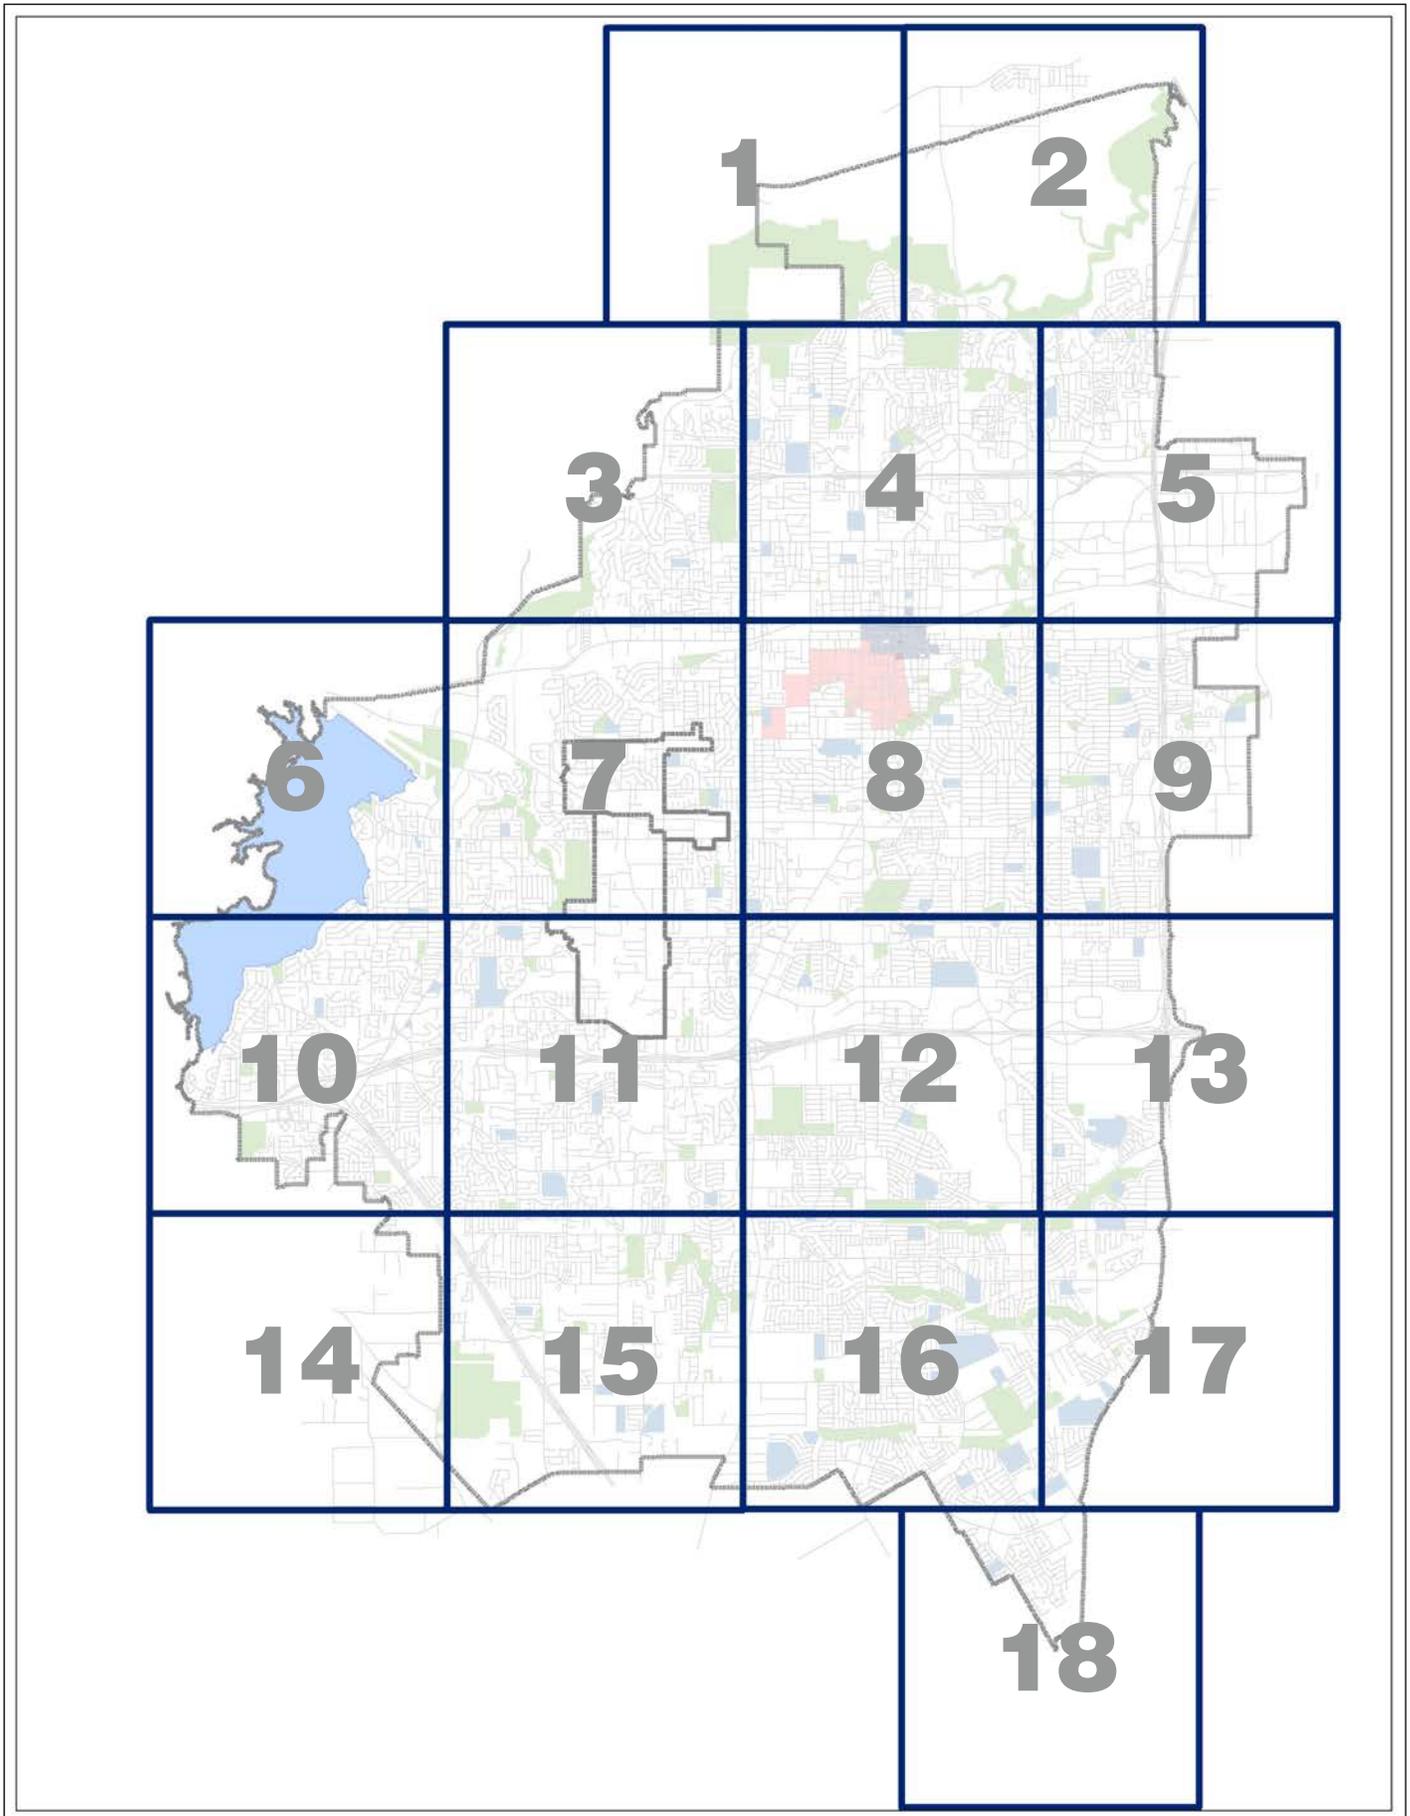

Hike Grid Maps

Overview

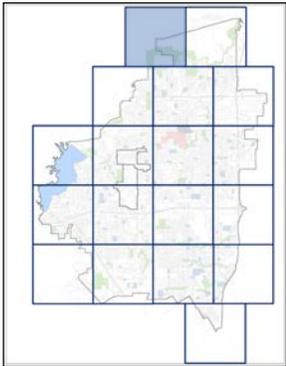

The following pages contain the recommended hike and bike system network grid maps. The city network maps were divided into 18 3x3 mile grids for purposes of legibility and easier interpretation. The first set of grids contains the bike recommendations, specifically the on-road bike facilities (broken into specific facility type and likely method of construction), greenway, and Veloweb recommendations. The second set of grids contains the hike recommendations, specifically the sidewalk, crossing improvement, greenway, and Veloweb recommendations. An overlap of approximately 1/8 of a mile is provided between each grid.

As described previously, the hike and bike system recommendations set a framework for development over the long-term. Hike and bike facilities will be developed segment-by-segment through a variety of mechanisms: future roadway reconstruction projects, roadway reconfiguration projects (such as road diets and restripes), standalone projects, commercial/residential development projects, and right-of-way acquisition/development. These maps will need to be updated within five years.
