

The Tri-School Streets Improvements project includes: water, sanitary sewer, storm water drainage, street lighting, and street pavement improvements. Various construction operations will take place at multiple locations during this project. This traffic control plan is based on best assumptions that numerous conditions go relatively smooth. Additional traffic detour(s) will periodically be implemented for short periods to accommodate specific utility construction and then the traffic detour will return as diagramed. Access to all properties will be maintained. All detours will include signage. Traffic detour updates will be posted on the City of Arlington internet home page. www.arlingtontx.gov/trischools

We realize construction is a major inconvenience. We request and appreciate your patience and cooperation during these inconveniences and delays as these needed infrastructure improvements are constructed.

Tri-School Street Improvements Anticipated Construction Detour Phase III

CONSTRUCTION SCHEDULE
START: SUMMER 2014
COMPLETION: FALL 2016
